LinkedIn

Skills

Analytics Engineering & Architecture
SQL, PySpark, Data Modelling, Medallion Architecture, ETL/ELT, dbt

Platforms & Engineering
DataBricks, Azure Data Lake, Databricks Connect, Unity Catalog, Git

BI & Analytics
Power BI, DAX, Power Query (M), Looker Studio, Data Quality, Data Visualisation, KPI Design

Programming & Automation
Python, Pandas, NumPy, APIs, Agentic Workflows

Applied AI & ML
Agentic Engineering, scikit-learn, Predictive Analytics, LLM Applications

Certifications

Data Engineer Certification
May 2025
Bluefrog

Microsoft Certified: Azure AI Fundamentals
Aug 2023
Microsoft Azure

Microsoft Certified: Azure Data Fundamentals
Jun 2023
Microsoft Azure

Profile

Business-minded Analytics Engineer combining consulting, data engineering, BI, and automation. Experienced in translating complex business challenges into scalable, self-service analytics and reliable data solutions, from requirements and architecture through implementation, validation, and delivery. Strong end-to-end ownership, working independently with C-suite, product, engineering, and client stakeholders.

Experience

NewDays — Utrecht
Founding Analytics Engineer — Aug 2025 – Present

- **Own data and analytics initiatives end to end** as the first in-house data specialist, translating complex business needs into practical solutions, from stakeholder discovery and technical design through implementation and delivery.
- **Led the technical design and implementation of an Azure Databricks analytics platform**, defining the Bronze, Silver and Gold architecture and building PySpark/SQL transformation pipelines to replace Power Query-based processing.
- **Established data-quality and validation processes** for the new platform, supporting reliable analytics and the initial rollout of production dashboards.
- **Developed an agent-assisted engineering workflow** using Databricks Connect, Unity Catalog, GitHub and Power BI project files (PBIP), enabling AI-assisted development across data pipelines and BI projects.
- **Led and automated a ~30 GB data migration across ~60 tables**, owning data mapping, transformation, validation, issue resolution and stakeholder coordination.
- **Delivered business-critical BI solutions**, including compliance reporting for a ~900-employee client and a data-quality dashboard supporting a major data-integration initiative and C-suite decision-making.

Source.AG — Amsterdam, Netherlands
Data Implementation Specialist — Sep 2023 – Aug 2025

- **Led a four-person data integration team**, running stand-ups, allocating work, coaching colleagues and coordinating customer-data integrations across multidisciplinary product teams.
- **Reduced the main operating costs of operational reporting by more than 42%** by implementing automated dashboards and reporting in Databricks, replacing a substantially more manual reporting process.
- **Improved data-integration speed by more than 20%** by automating manual integration workflows in Retool and reducing hand-offs through more independent technical troubleshooting and code analysis.
- **Collaborated on the integration of a prescriptive analytics product for greenhouse growers**, enabling data-driven irrigation recommendations and greater automation of greenhouse irrigation.
- **Built operational, product and commercial analytics in Databricks** for stakeholders ranging from team leads to the COO, covering product usage and applicability, client insights and commercial KPIs.

Education

University of Amsterdam
MSc Data Science
2022 – 2024
Selected coursework: Machine Learning, NLP, Deep Learning, Econometrics, and Big Data.

University of Amsterdam
MSc Business Administration
2021 – 2022
Focus: Leadership, Management and People Analytics.

Amsterdam University of Applied Sciences
BBA Business Administration
2018 – 2021

Interests

Bouldering

Senior Data Scientist | Source Control

Patrick Hafkenscheid
Senior Technical Manager | Deloitte Remediation Platform for banks

Deloitte Amsterdam, Netherlands
Data Consultant Aug 2022 – Sep 2023

- Contributed as a **full-stack developer to a remediation platform for a major Dutch bank**, using Django, Python and Pandas.
- Built **management-information analytics for a 100+ person Customer Due Diligence operation**, using Python, Pandas and Power BI to support process optimisation and management decision-making.
- Improved **data collection and data quality for a major Dutch telecom provider** through SQL-based analysis and engineering.

Leadership & Volunteering

BuurtBuik Amsterdam, Netherlands
Board Member, Coordinator & Volunteer Jan 2026 – Present

Volunteer since Jan 2026; coordinator since March 2026, appointed Board Member in Sep 2026. Help coordinate volunteers and weekly operations for an Amsterdam food-rescue initiative serving ~65 guests each Saturday through cooked meals and take-home food packages.

Selected Projects

Hope — AI-curated news & historical progress analytics

Built a data product combining **AI-filtered live news with interactive historical analytics** from sources including the World Bank and Our World in Data, featuring dynamic categorisation, uncertainty indicators, configurable time ranges, methodology/source transparency and automated newsletters.
